Case studies

A closer look at how 16 schools around New Zealand have tackled food and nutrition issues, and the benefits they're seeing as a result.

Some schools are just starting out, while others have been focusing on this area for some time. All of their stories are inspiring and will give you, your students, and your community some fresh ideas for improving health and well-being at your school.

Breens Intermediate School

School location: Christchurch

School decile: 6

"We are seeing changes around the school, with students discussing healthy lunch options with us and being proud of bringing and eating healthy food." -Teacher

The school ethos and organisation

Gradual changes are making Breens Intermediate School a healthier place. Teachers had become concerned about the unhealthy food sold in the school's canteen, the poor food choices available at lunchtimes, students' lack of concentration during the afternoons, and the litter around the school.

The school recognises the need to provide consistent messages by modelling healthy eating practices and interacting with students in ways that support classroom teaching.

Students are encouraged to eat bread or fruit during the 10am break, which follows a 20-minute physical activity session. They are also encouraged to eat healthy snacks during the other three breaks of the day, and some teachers actively discourage students from eating unhealthy food. Lunch is eaten in classrooms, supervised by teachers.

Pasifika Hotshots

You are here: Home – *Pasifika Hotshots*

Pasifika Hotshots

Kia orana, fakaalofa lahi atu, taloha ni, talofa lava, malo e lelei and welcome to the *Pasifika Hotshots* website.

Pasifika Hotshots is a vibrant collection of stories and resources available for you to enjoy and use in your classroom or community. It is a celebration of five unique stories told by Pasifika students from Newlands College, Rongotai College, and Wellington East Girls' College.

The five digital stories (short video clips) reflect some of the experiences, views and humour of young Pasifika people growing up in New Zealand. The themes they have explored include immigration, language barriers, family, and challenging tradition.

The stories evolved out of facilitated workshops run within the three schools. The extensive workshop notes and worksheets that were used during the workshops are also here for you to download and use in your classroom. Links to the New Zealand curriculum and a list of useful resources, additional information, and background reading are also included under the headings, 'Resources' and 'Curriculum links'.

The workshops were run over two and a half days and in that time two groups of five students had to write, film, and complete a first edit of their video. The students acted, directed, and even composed original music. The groups were then left for two weeks to complete the editing. The facilitators then returned to the schools for a debrief and a screening of their completed works. Watch the five student videos here on *Pasifika Hotshots*.

You too could make your stories into fabulous short videos. Take a look at these student videos to view the different types of stories they have created and the themes they have explored. Download workshop notes and lots of helpful worksheets to guide you through the process.

To navigate through the *Pasifika Hotshots* collection, click on the headings on the right-hand of the screen. In addition, the sitemap shows the complete contents of this key collection, with links to all the pages.

Dr Rod Claycomb

Job
Sensortec specialises in developing electronic equipment to measure specific molecules in biological substances, for example to detect hormone levels or the presence of antibiotics in milk.

Rod's role as CEO of this innovative company is diverse. He leads the Research and Development team, sets the overall direction of the company, and is also responsible for overseeing financial and marketing decisions. When Rod started with Sensortec it was a small company of five people. It has now expanded to sixteen.

Rod loves the fact that his work is dynamic, innovative, and helps dairy farmers. Because Sensortec is such a "cutting edge" industry, Rod does a lot of international travel. He enjoys the range of experiences that this gives him. He meets a huge range of people from diverse cultures and gets to see different perspectives of dairy farming from all over the world.

Career Pathway
Rod grew up in Pennsylvania, USA. As the son of a milking machine dealer, he had an early introduction to the use of automation on farms. Except for a short stint where he

Digital Conversations

Digital Conversations – Home

digital conversations
thinking out loud

Kia ora and welcome to *Digital Conversations*, the website putting primary and secondary students in touch with local and overseas speakers through videoconferencing.

Students can discuss an exciting range of topics with experts in their field. Take a look at the video clips on this page to see some of the great conversations we've been having.

To participate in a videoconference or to send suggestions about guests you'd like to talk to, contact us at digitalconversations@cwa.co.nz and we'll see what we can do.

Coming up on *Digital Conversations*

2008 videoconference programme coming soon.

How can my school participate in a videoconference?

If you are on SchoolZone you are possibly already capable of videoconferencing within your current monthly Telecom SZ service fee. Alternatively being serviced by another provider at $12k of consistent and reliable network with Quality of Service could mean you are capable of accessing this service.

asnet Technologies manages the videoconferencing schools' network using the Ministry of Education's bridge to connect schools for a variety of purposes. This includes teaching and learning opportunities such as digital conversations, teacher professional development and virtual field trips. Many schools have SchoolZone Full, a circuit that sustains both videoconferencing and internet traffic. A growing number of schools are using local providers. All schools can dial other schools from their videoconference system directory, regardless of their network.

Over 200 schools and many tertiary institutions are using videoconferencing for digital conversations enabling them to access experts, offer subjects not available locally, and enhance communities by making tertiary and other provider opportunities available without the need to travel.

If you are keen to find out more about the technology involved in videoconferencing, check the asnet website: www.polycomnz.co.nz and click on products or email digitalconversations@cwa.co.nz.

What they're saying about us

Digital Conversations commendation

Many thanks to the Book Council and your speakers. This is a valuable resource and very much appreciated by a small rural college.
